AMENDMENTS TO THE CLAIMS

The following listing of claims will replace all prior versions, and listings, of claims

in the application:

Claim 1 (currently amended): An impact modified thermoplastic olefin composition

comprising consisting essentially of a blend of one or more polyolefin homopolymer

resins, from about 17% by weight to about 30% by weight of one or more rubbery

copolymers comprising at least one alpha olefin, and from about 1.0% to about 8.0% by

weight of one or more nonionic surfactants.

Claim 2 (currently amended): The impact modified thermoplastic olefin composition

according to claim 1 further comprising up to about 8% by weight of mineral oil or

polybutene, provided that the mineral oil or polybutene is present in an amount that

does not exceed 8% by weight.

Claim 3 (original): The impact modified thermoplastic olefin composition according to

claim 1 wherein the polyolefin homopolymer resin is a polypropylene homopolymer.

Claim 4 (original): The impact modified thermoplastic olefin composition according to

claim 1 wherein the nonionic surfactant is selected from the group consisting of

ethoxylated ethers, ethoxylated alkylphenols, ethoxylated aryl phenols and ethoxylated

sorbitan fatty acid esters.

Claim 5 (original): The impact modified thermoplastic olefin composition according to

claim 1 wherein the nonionic surfactant is selected from the group consisting of

polyoxyethylene sorbitan monolaurate, polyoxyethylene sorbitan monopalmitate,

polyoxyethylene sorbitan monostearate, polyoxyethylene sorbitan tristearate,

polyoxyethylene sorbitan monooleate and polyoxyethylene sorbitan trioleate.

Application No.: 10/668,041

Amendment Dated: April 15, 2005

Page 4

Claim 6 (currently amended): An impact modified thermoplastic olefin composition

comprising consisting essentially of a homopolymer of polypropylene, from about 17%

by weight to about 25% by weight of a rubbery copolymer of ethylene and octene, and

from about 1.25% by weight to about 4% by weight of an ethoxylated sorbitan fatty acid

ester.

Claim 7 (original): The impact modified thermoplastic olefin composition according to

claim 6 wherein the ethoxylated sorbitan fatty acid ester is polyoxyethylene sorbitan

trioleate.

Claim 8 (original): The impact modified thermoplastic olefin composition according to

claim 6 having an instrumented impact strength at -30°C. of 100 in-lbs or greater as

measured in accordance with ASTM D 5420 and a flexural modulus of 1.4 x 10⁵ psi or

greater as measured in accordance with ASTM D 790.

Claim 9 (currently amended): A method of forming a part comprising providing a

thermoplastic olefin composition comprising consisting essentially of a blend of one or

more polyolefin homopolymer resins, from about 17% by weight to about 30% by weight

of one or more rubbery copolymers comprising at least one alpha olefin, and from about

1.0% to about 8.0% by weight of one or more nonionic surfactants; heating the

thermoplastic olefin composition to form a flowable melt; injecting the flowable melt into

a mold; and removing the part from the mold.

Claim 10 (currently amended): The method according to claim 9 wherein further

comprising painting the part.

Application No.: 10/668,041 Amendment Dated: April 15, 2005

Claim 11 (new): An impact modified thermoplastic olefin composition comprising a blend of one or more polyolefin homopolymer resins, from about 17% by weight to about 30% by weight of one or more rubbery copolymers comprising at least one alpha olefin, and from about 1.0% to about 8.0% by weight of one or more nonionic surfactants selected from the group consisting of polyoxyethylene sorbitan monopalmitate, polyoxyethylene sorbitan monostearate, polyoxyethylene sorbitan tristearate, polyoxyethylene sorbitan monopalmitate and polyoxyethylene sorbitan trioleate.
